

Sympathetic Rehabilitation and Strengthening of Masonry Arch Bridges

This CPD seminar examines the causes of typical masonry arch defects and how bridges suffering from such faults can be sympathetically rehabilitated by using innovative non-disruptive repair techniques from Helifix.

During a one hour seminar we also address the need for bridge strengthening, to meet modern weight loading requirements, using proven computer analysis and designed reinforcement that leaves the appearance of the structure unaltered.

Seminar programme

- Helifix Technical Expertise
- Typical Masonry Arch Defects
- Helifix Non-disruptive, Repair Techniques
- Computer Based Strength Analysis
- Strengthening to Modern Requirements
- Case Histories
- Summary
